#	Element	Relevant	Successes	Failures	Score
15	Using an <code><article></code> tag on content that is not self-contained and that cannot stand on its own outside the context of the page, such as a blog post, news story, or forum entry, causes screen readers to announce misleading information about the purpose the content in relation to the main subject of the page.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
16	Main navigation elements should have role navigation to ensure that screen readers can identify them as navigation regions.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
17	A navigation landmark should identify a section that contains primary links for moving through the site or page. Using navigation landmarks for minor or secondary link groups makes it harder for screen reader users to locate the page's key navigation areas.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
18	A page typically presents one central subject, so a single main landmark establishes the boundaries of the primary content for screen reader users. Multiple main landmarks create uncertainty about the scope, leading to confusion and difficulty navigating the page.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
19	A <meta> element with http-equiv="refresh" is sometimes used to automatically redirect users after a time delay. These timed changes can interrupt and disorient users who rely on assistive technology	No	0	0	

#	Element	Relevant	Successes	Failures	Score
20	The alt attribute is used to provide a text alternative for images. It is not meant to be used on elements other than images and therefore will not be read using screen-readers.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
21	An iframe needs a label that describes its purpose to screen reader users.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
22	In most cases, using role=menu on navigation elements within a web page can negatively impact screen reader users, especially those using JAWS. The attribute should be used for menu types that function like those found in desktop applications.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
23	In most cases, using role=menubar on navigation elements within a web page can negatively impact screen reader users, especially those using JAWS. The attribute should be used for menu types that function like those found in desktop applications.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
24	In most cases, using ARIA menu roles within a web page can negatively impact screen reader users, especially those using JAWS. role="menuitem" should be used for menu items in menu types that function like those found in desktop applications.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
25	Make sure that no element has an autofocus attribute.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
26	Using role="application" is generally discouraged because it disables standard screen reader modes and forces users into an application mode. This removes familiar navigation shortcuts, such as heading or landmark navigation, and requires them to interact in ways they may not expect.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
27	A sticky footer remains anchored to the bottom of the screen while the rest of the page content can be scrolled. If it is not offset from interactive elements, it can overlap and obscure the item in focus.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
28	A sticky header remains anchored to the top of the screen while the rest of the page content can be scrolled. If it is not offset from interactive elements, it can overlap and obscure the item in focus.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
29	Ambiguous links like "Learn More", "Shop Now" and "Start Here" are often used as a call to action. However, screen-reader users, while using link navigation, do not interact with content above or below the link and therefore don't have the same context as to what they will learn more about.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
30	Activating anchor links enables users to navigate to a different section within the same page by scrolling and moving keyboard focus. Anchor links that do not contain visible text or labeled images should be assigned labels that inform screen reader users of their destination.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
31	Visual cues are often used by sighted users to indicate which link represents the current page within a set of links. This information should be made available to screen reader users by assigning aria-current='page' to the link.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
32	Interactive elements that trigger additional content should only have relationship and state ARIA attributes, such as aria-expanded and aria-controls, if they have interactive roles, such as button, tab, combobox and in rarer cases, link.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
33	Aria labels should describe elements that don't have proper text, like icons and field labels. It should not be used to override element texts. Screen reader users need to receive the exact text as visually on the screen, with more context if it is ambiguous. An exception applies to landmarks such as nav or other landmarks: here, ARIA labels can provide additional context or clarification.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
34	Screen readers rely on properly coded and associated labels to announce the purpose of a form field. A checkbox control without an identifiable label may prevent screen reader users from completing the form.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
35	Interacting with form controls shouldn't automatically submit a form or cause any other change in context without notifying the user in advance. Form controls that cause a context change on input can disorient a user, since the behavior is not expected.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
36	Adding type="submit" to a control that submits a form ensures that screen readers users expect a change of context when they activate the control.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
37	A slider should be operable with a single pointer	No	0	0	

#	Element	Relevant	Successes	Failures	Score
38	Screen readers rely on properly coded and associated labels to announce the purpose of a form field. A radio control without an identifiable label may prevent screen reader users from completing the form.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
39	If a field is marked as required only through visual cues, but lacks the required attribute or <code>aria-required="true"</code> , screen readers will not announce it as mandatory. As a result, users may experience unnecessary delays or confusion when trying to submit the form.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
40	Functional images presented using CSS background or background-image properties should be marked up using <code>role="img"</code> so that they can be identified as images by screen reader users.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
41	Smaller graphics used as decorative or complementary elements, such as icons, and that do not provide additional information will often add unnecessary clutter to a screen reader user's browsing experience.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
42	Images require a text alternative when the image conveys meaningful content or serves a functional purpose. If the image is decorative, it must be hidden from assistive technology.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
43	Text alternatives must provide accurate descriptions of the image. Incorrect text alternatives, such as filenames or other placeholder values, may cause screen reader users to either miss essential information or hear unnecessary content that disrupts navigation.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
44	When non-graphical elements are marked up as images, screen reader users may misunderstand the intended purpose of the content.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
45	A breadcrumb region presents a trail of links showing the user's current page in relation to higher-level pages on a site. Without a label, it may be announced by screen readers simply as "navigation", making it hard to distinguish from other navigation regions on the page.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
46	Breadcrumb navigation regions are essential for user orientation. If not appropriately tagged, screen reader users will not know that such an option exists on the page and will face more difficulties browsing around.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
47	Elements with emphasis importance should have the emphasis role. If not, screen reader users may not understand the emphasis of the text.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
48	Discounted prices often appear next to the original and distinguished with visual cues like strikethroughs or color changes. Both prices must also be conveyed by screen readers in a way that enables users to differentiate between the values, ensuring they can understand when a discount is applied.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
49	Elements with strong importance should have the strong role. If not, screen reader users may not understand the importance of the text.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
50	A tablist without role="tablist" is not announced as a group of related tabs, which prevents screen reader users from recognizing the structure and purpose of the component. This makes it harder to navigate between tabs and understand that the controls belong to a single set.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
51	Applying role="tablist" to an element without tabs misleads screen reader users by suggesting a group of tabs that does not exist.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
52	Custom tabs must be explicitly defined for screen readers since there are no native HTML tab elements. Without assigning role="tab" to the interactive elements, assistive technology will not identify them as tabs, preventing users from understanding their function or navigating them as part of a tab interface.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
53	Applying role="tab" to an element that is not part of a functioning tab interface misleads screen reader users by presenting it as a tab without a corresponding panel.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
54	The role="tabpanel" identifies an element as the content region of a tab interface. Without this role, panels are exposed only by their native role (such as a generic div or a named section) and screen reader users may not perceive them as part of the tab structure.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
55	Applying role="tabpanel" to an element without a corresponding tab misleads screen reader users by announcing it as tab content, even though no controlling tab exists.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
56	If a column header is not marked up with the correct role or scope, screen reader users cannot determine which header applies to each cell.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
57	If a table header cell is empty, screen reader users may only hear a generic label such as "column 3" or nothing at all. This makes it harder to understand what each column or row represents.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
58	When a layout table is marked up with HTML elements like <table> or <tr>, or assigned table ARIA roles, screen readers announce a data table structure with rows, columns, and headers, even though the table is only used for page layout.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
59	Nested tables are often misinterpreted by screen readers, making it hard for users to follow the intended structure and meaning of the data.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
60	If a table row header is not marked up with the correct role or scope, screen reader users cannot determine which header applies to each cell.	No	0	0	

WCAG Best Practices (Not included in score)

#	Element	Relevant	Successes	Failures	Score
1	The contentinfo region, typically represented by the <footer> element, is found at the end of each page and provides screen reader users with information about the website, such as copyright, contact details, legal information, and navigation links.	Yes	Pass	-	100

Code snapshots of successful elements
